

The Registration process is only as good as the people who register their plants, and the quality of the information that they provide. I want to thank all who have taken the time to make this an informative and educational effort. There are 150 new registrations for 2008. There are now a total of 3940 registered hostas. As the comprehensive index has become longer than the yearly registrations we are moving to publish the index every third year. You are reminded that last year's comprehensive index includes all but this year's registrations, we will also maintain a complete index on the Registrar's Web site between hardcopy versions. Under the *International Code of Nomenclature for Cultivated Plants* (ICNCP), registrations are established when printed in a publication that reaches the general public. Thus, although these and other names may appear elsewhere, especially if only found in electronic media, they may not be established. (See also, **Plant Patents, Plant Breeder's Rights and Establishment** below.)

**New Form Attached:** The simplified registration form (included at the end of this publication) was introduced in June of 1998. Part of the simplification at that time was to give registrants the option to place their cultivar in a more general category rather than give the specific dimensions. These categories (miniature, small, med., large, and giant) were somewhat arbitrary and their use was allowed was, but a strong emphasis on actual measurements was encouraged. Since their inclusion greater than 90 percent of the registrations contained actual measurements, and where the registrant used the generic term and the measurements, the generic term was not the correct one based upon those measurements. Thus, as actual measurements provide greater information we are moving back to requiring actual measurements rather than generic terms.

However, the most significant change in the form has been to smooth out the form. In an attempt to encourage registration the 1998 simplification provided that only the required information was required on page 1 and thus one could simply fill out page 1 and that was sufficient, this caused a wide variation in what information was provided and a "hodge podge" of registration information across cultivars. More importantly by breaking up information about the cultivar, e.g., with flower information on page 1 and page 2, leaf information on page 1 and page 2, etc., it also became apparent that there was a breakdown in what went where and also there was an ever increasing amount of discrepant information provided; with the information page 1 often not agreeing with the information provided on page 2. In some cases it was almost like the information being provided was for two entirely different cultivars. Thus, the form has been revised to include a section for general information, followed by sections corresponding with the relevant part of the plant. The required information is in bold-faced print. The form makes it clear that the information requested in the bold-faced areas must

be filled out completely. Completely can include answers such as not applicable for this cultivar, if, and only if, such an answer is appropriate, not just because it is not convenient to collect the required information.

Under parentage information (found within the brackets at the end of each cultivar entry) the category of "parentage unknown" was added in 1997. I strongly request that registrants be more informative in the future especially where the parentage information submitted provides no guidance as to the parentage, such as [seedling × seedling] or [sport of stabilized seedling of unknown parents]. This does not imply anything regarding the validity of information submitted by the registrant, only that the description as registered adds nothing to the genetic, or parentage knowledge base. Parentage information published with registrations is intended to be "known parentage" as opposed to guesses, educated or otherwise. The abbreviation "TC" is used to indicate "tissue culture."

In reviewing this year's submissions, many persons who have listed themselves as the originator, are also indicating that the seedling or sport that was used for measurement purposes to complete the registration was obtained from the originator. Please keep in mind that, if you are the originator you did not obtain the plant from anyone – thus, you are the originator. On the other hand if you have received the sport from TC and the plant being TCed was not yours, then you likely are not the originator. Think this section through when filling out the form, simple logic should help you with the answer. Please, if you have any questions regarding any part of the form do not hesitate to e-mail me with your questions.

In registering hostas, classifying them for Hosta Shows and for those entering and judging them, I am finding that there are several problems with the determination of the margin colors, as well as the base color descriptions, that are submitted by the person registering the hosta, especially if the registrant is looking at yellowish green, greenish yellow, creamy yellow, or other similar compound color descriptions. To elaborate: 1) registrants most often have no reference chart to consult (i.e., what is the difference between greenish yellow and yellowish green) and 2) the margin color may change rather rapidly and it depends at what time they make their observations. If the greenish is very early and lasts only a couple of weeks, then turns to cream, then we should register it as white, if it turns to yellow, then yellow, or if to chartreuse, then green. In an effort to ease this dilemma, we will be providing sometime in the future at the Registrar's Web site a series of sample charts (coming soon), with codes to assess the accuracy of other codes, or of your computer/printer color indicators and to improve your registration information. More detailed RGB or Hex # color charts may be found at various Web sites, or by ordering the Royal Horticultural Society Colour Chart.

**Brief Key to Descriptions: ONIR:** O=originator, N=nominant (namer), I=introducer, R=registrant.

**Flowers:** Another change that we are making in the revised form is to eliminate the use of bloom period codes, as less than 10 percent of the registrants ever used them and in those cases the use was often inconsistent with dates given in the same form, or across forms from the same registrant. Very little useful information has been gained by that part of the form, which also was responsible for the greatest number of questions from prospective registrants, and thus we are eliminating it. However, I strongly encourage exact bloom period dates be given, especially when we know where the plant was grown.

**Forms:** Registration forms are available from the registrar, or may be obtained on the Internet at: <http://www.hosta.org/> at: <http://hostalibrary.org/> or from the Registrar's website [www.hostaregistrar.org](http://www.hostaregistrar.org).

**Plant Patents, Plant Breeder's Rights and Establishment:** Principle 5 of the ICNCP states:

"This *Code* regulates the terminology to be used for distinguishable group of plants in cultivation and the names to be applied to individual distinguishable groups."

"Under some national and international legislation such as that providing for National Listing or Plant Breeders' Rights (Plant Variety Rights), names may be established for distinguishable groups of plants using terminology peculiar to such legislation. This *Code* does not regulate the use of such terminology or the formation of such names but recognizes that, under such legislation, these names take precedence over names formed under the provisions of this *Code*."

Article 28.2 of the *Code*: "the name of a cultivar accepted and published by a statutory plant registration authority, even if using alternative terminology must not be rejected under the provisions of this *Code*."

In keeping with this principle, included on page 22 is a table of hostas that have been processed under one of these pieces of legislation. The table also indicates which have already been registered. Those which have not been registered have been established and thus, those names although, not registered, are not available for use by any other person. Of note, of the 73 cultivars granted these other protections, 62 are already registered. Thus, it is reassuring that most still feel the registration process is as valuable as the legal protections afforded by certain jurisdictions.
